Okay im impressed!! Ive been dealing with driver iissues for months now, Thanks to win 10 updates. I tried reinstalling my OS multiple times which would work until windows update screws it up again but thanks to this handy program, I think I finally

have it whipped! Im so excited.. Instantly solved a driver issue that caused a memory leak. Free ram to work with hoorray! Also try IOBit Uninstaller from their website.. OMG It helps me i play heroes and generals on low fps and now 00 its have big fps oh i forget look at fps xD. I never write reviews, but this product - this is a product that deserves recognition. I used to have blue screens and lockups all day long, racking my brain over what in the world could be wrong. Is it hardware, is it software? I kept asking myself this question. I used WinDbg to try to sort out what the problem was from dump files, and it didn't help. Always a different kernel error code, always an OS .sys file that was the culprit, no real indicators that it was any one driver in particular. Sometimes I wouldn't even get a dump file and the computer would just black screen or freeze up. Hard time figuring out what kernel mode driver caused the problem. This piece of software just updated all my devices in a few minutes, and my PC has worked flawlessly ever since.. this a threat to you pc nearly broke my and noobs get mad at me in the review comments
